

Triple Stacker

Lifting capacity: 14,000 lbs. / 6,350 kg
Overall length: 193" / 4,911 mm
Platform length: 155" / 3,928 mm
Overall width: 114" / 2,896 mm
Platform width: 95" / 2,403 mm
Overall height: 280" / 7,120 mm
Voltages: 208-230-volt, 380-volt or 440-volt

The PL-14000 is a 4-post parking lift designed for both indoor or outdoor lifting and parking operations. The PL-14000 parking lift is engineered to be the most cost effective way to triple the capacity of a typical parking area.

With its triple stacker design, the PL-14000 is the ultimate space saver allowing three vehicles to be stacked in a single parking space. Shared, ganged columns increase value by reducing the number of components required for multi-unit installations. Each triple stacker parking lift uses a specially designed base frame that distributes the load making these unique lifting systems suitable for installation on virtually any residential or commercial concrete floor.
